### Gewerkt vanuit Nederland op 144 MHz

## Commentaren

PA0EMO: De condx vielen wat tegen maar er waren toch nog genoeg leuke openingen richting OK, HB, F en ook nog een SN. Helaas was mijn pre-amp defect (wellicht statische lading?). Ook moest ik het met half vermogen doen omdat mijn Mirage 310B in de mast het had begeven (waarschijnlijk per abuis wat teveel vermogen op de ingang gehad). Dat scheelt toch in de resultaten. Er is dus wat werk aan de winkel voor volgend jaar. Desondanks weer plezier gehad.  
73, Jan PA0EMO

PA0FEI : Hoewel vooral zaterdagavond en zondagochtend het weer af en toe ruig was, vielen de condities beslist niet tegen, want in openingen waren best leuke qso's te maken. natuurlijk maakte de goede activiteit ook heel veel goed. de seinsleutel moest er aan te pas komen om OL1R in JO70LR te werken, verder kon alles met de microfoon worden afgehandeld. De apparatuur hield zich goed, hoewel de antennerotor wel steeds meer begint te kreunen, maar zo weten de burens ook wanneer ik radioactief bezig ben...

Rond 14:15 LT de knop omgedraaid en op de fiets naar buurstation PI4M gereden, waar men reeds was begonnen met opruimen van het station. Hoewel we erg dicht bij elkaar zitten, hebben we wederzijds geen last van elkaar ondervonden. Matuurlijk is het wel even schrikken als je over de band draait en een heel hard signaal tegen komt!

PA0MIR: Niet kapot van de signalen, alles heel zwak en de activiteit in CW was ook heel beperkt.

PA5MS: Just qrv for some time to pick out some nice dx and work old friends. conditions rather flat. Some good signals from Italy IO2V was steady readable for the whole time i was qrv. Also I2XAV/1 had a nice signal. Only one qso into JN99 this time.

## Buitenlandse commentaren

2W0JYN (IO83LA): Conditions varied to wet saturday to dry sunday with lot of QSB on saturday and QRM from stations that abirterate the top and bottem end of the band. Thanks to all stations worked.

G0OLE (IO93NR): Pseudo /P from my conservatory with club members, hence the fixed station multi for a change. Huge fun, nice au with GM4VVX, nice tropo with GM8IEM, lots of backpackers. Some huge signals, but all pretty clean on the SDR.

G0TAR (JO01GI): Gd DX at times but high local noise.

G0VHF (JO01PU): Largely entertaining; Weather adequate. Should have broken 200k QSOp. Must try harder!

G1ONE (IO83RO) : Unable to use central portion of band from a "barn door" signal.

G1PPA (IO93OJ): Noisy, good activity on and off.

G1WOR (IO91SA): Wet and windy.

G2XV (JO02AD): Gales, rain, blown down mast, lucky to keep tents. Slight lift to east? Well supported team event.

G3MEH (IO91QS): Well down on last year and several gotaways, but some good distances. Thanks for the QSOs.

G3WJG (IO91RP): Good to EU with many statios on.

G3YJR (IO93FJ): I was pleased to get some continental stations on 10W. A struggle though.

G4B (IO91HP): Average condx, some stations seemed to have very poor rx (59 with me and not even a QRZ).

G4FUR (IO91VH): Opportunity to air cats callsign and demonstrate 2m contesting to club members. Tnx for QSOs.

G4HGI (IO83PL): Poor condx bad rain.

G4NBS (JO02AF): A pleasant day spent chatting with old friends in amongst a few contest QSO's! Good to work some decent EU signals through my QRN, DLOGTH audible all weekend up to S9. Little UK activity till Sunday. 40 Squares and didn't really try hard, maybe i'll actively use KST next year??

G4XZL (IO80CN): WX good for a change, conditions average.

G4YHF (IO92XW): Condx nothing special. Very breezy. 9A0KG heard only. Prop mode unknown. Didn't sound like MS as 30 secs plus.

G5RS (JO00EW): Good before start but got worse and worse saturday. Sunday flat as a pancake. No equipment issues this time. Weather mainly good: A little rain friday for set up, dry for pack up sunday. Very enjoyable weekend. Many thanks to all that helped the club.

G5TO (IO93FL): Wet, windy, cold saturday. Better sunday.

G8DOH (IO92FA): Static rain saturday. Radiated noise problems from several /P stations. Amongst it all some reasonable distances worked.

G8FMC (IO91NW): Trying for the 25W cert. Very painful & slow. Managed a couple of D stations though which is miraculous from this QTH!

G8HGN (JO01FO): Reasonable DX, hampered after 1200Z by TVI(F1 GP was on). So no contacts from E to SE. Saved by the French!

G8LZE (IO91SO): Difficult and time consuming to break through the continental QRM wall with low power.

G8P (JO01QD): Great weekend, a big effort by our small team was rewarded by reasonable conditions, even the weather was fairly kind. Thanks to all that called in.

G8REQ (IO83KI): Nice couple of hours operating whilst in/out of shack for other duties. Good to work a little DX without the UKAC noise levels.

G8T (JO01KJ): Conditions more or less flat with slight enhancement towards south west and spain. WX reasonable for the time of year. No equipment problems for a change - everything worked except the internet which failed from 2300 to 10.30 and prevented us making many skeds on ON4KST.

G8W (IO90JO): Some slightly elevated condx at the beginning, flat otherwise. Weather overnight was somewhat sporty...

G8ZRE (IO83NE): Many DX stns heard but not worked.

GM3HAM (IO74WV): WX dull breezy saturday, sunday very nice until we packed up. - Cloudburst sunday above average.

GM4TOE (IO87RP): ODX proves that if operators decided to beam north they would achieve high scoring contacts.

GM4VVX (IO78TA): Condx looked better than average but little activity. Strong aurora for 2 & half hours sat' eve', again few active. When beams did come north surprisingly easy QSOs.

GM8IEM (IO78HF): Slightly enhanced tropo to the south, but little activity.

GW8ASD (IO83LB): Interesting spread of activity, although not very busy. Tried and failed with DR9A. Just not enough power here!

GW9T (IO83KB): One very strong station kept causing me major problems, could here him the entire band !

M0NVS (IO91SR): Conditions seemed better on the sunday morning. Reasonable activity.

M0OMB (IO83PO): Despite the wet WX, condx seemed quite good on sat so enjoyable. Sunday much worse, few new stns hrd and very hard going. Few answers to my cq calls.

M1BQY (IO81RF): A far more enjoyable contest than the may event, due to IARU activity. Reasonable condx and some nice dx!

M9T (IO90LX): An enjoyable contest. Not without problems but fixed these and were up and running with minimal downtime. WX went from warm and sunny to wet and windy. Conditions slightly enhanced to the south. S50C was briefly a good signal but couldn't hear us amongst the italians he was working. Thanks all for points de G4WFR & G0KYS.

ON8NT (JO11RC): Did some occasional operating during the contes, fun!
